Decimal division word problems grade 5 worksheets free worksheets

Name: _____ Date: _____

Decimals

Solve each problem. Round the answer to two decimal places.

- Mr. Williams decides to buy 12 gallons of Jerry paint to do up the exterior of his home. If he billed a total of \$35.46 for 12 gallons of paint, how much does one gallon of paint cost?

- Jack weighs 179 pounds on the weighing scale. He wants to calculate his weight in kilograms. If 1 kilogram equals 2.2 pounds, what is Jack's weight in kilograms?

- Kerry buys 5 honeydew melons from a supermarket. If they totally weigh 27.52 pounds, how much will one melon on an average weigh?

- Lisa packs 87.6 ounces of mineral water in her backpack. She wants to measure the water in liters. If 1 liter equals 33.8 ounces, how many liters of water is Lisa carrying in her backpack?

- Nina goes to the neighborhood store to buy 14 rolls of paper towels. She pays \$20.02 for her purchase. How much does one roll of paper towel cost?

Addition Word Problems

- There are thirty-six dogwood trees and thirty maple trees currently in the park. Park workers will plant fourteen more dogwood trees today. How many dogwood trees will the park have when the workers are finished? _____
- Joan has thirty-five books and she has read eight of them. Sally has forty-eight books. How many books do they have together? _____
- Sara found forty-three seashells and Nancy found thirty-one seashells on the beach. When they cleaned them, they discovered that forty were cracked. How many seashells did they find together? _____
- Mary had forty-one baseball cards, and eight were torn. Tom gave Mary forty-seven new baseball cards. How many baseball cards does Mary have now? _____
- Jason picked twenty-three plums and Mary picked forty-four plums. Sally picked thirty-five oranges. How many plums were picked in total? _____
- There are thirty-three pencils and thirty-seven erasers in the drawer. Keith placed forty-one more pencils in the drawer. How many pencils are now there in all? _____
- Sara grew twenty-five cantelopes and twenty-nine turnips. Benny grew twenty-seven cantelopes. How many cantelopes did they grow in total? _____
- Dan went to forty-seven football games this year, but missed twenty-two. He went to twenty-nine games last year. How many football games did Dan go to in total? _____
- Jason has fourteen violet and twenty-seven yellow marbles. Melanie has forty-eight violet marbles. How many violet marbles do they have in total? _____
- Tom had forty-one pennies and nineteen dimes in his bank. His dad gave him twenty-nine dimes and forty-eight nickels. How many dimes does he have now? _____

Division Word Problems (A)

Real-life problems

- Caroline costs \$3.50 a day on her paper route. How much does she earn per week?
\$3.50
x 7
\$24.50
- When Cheryl subtracts the width of her door from the length of her bedroom wall she finds she has 1.67 m of wall space left. If the door is 0.82 m wide, what is the length of her bedroom wall?
1.67 m
+ 0.82
2.49
- Stephen buys her mother a bouquet of flowers for \$12.45 and her brother some candy for \$2.26. If she has \$2.87 left, how much did she start with?
\$12.45
+ \$2.26
\$14.71
- \$2.87
\$11.84
- Ryder runs 2.7 mi each day. He would like to run as far as his brother, Sam, in 24.27 mi. How far will he have to run?
24.27
- 2.7
21.57
- Nadia is making some clothes which are 25.5 cm long. If the material she is using is 180 cm long, how many pieces will she need to make one dress?
180
÷ 25.5
7.07
- A cell uses 22.5 watts of electricity a day. If this same cell would consume 180 watts, how much will they have left after one day?
180
- 22.5
157.5
- Charles has 12.5 m of yellow thread. Corie has 6.6 m and Karen has 5.8 m. If they put their thread together how long will they have?
12.5
+ 6.6
+ 5.8
24.9

Division Word Problems (B)

Name: _____

Solve each problem. Show your work in the box.

- Mr. Williams decides to buy 12 gallons of Jerry paint to do up the exterior of his home. If he billed a total of \$35.46 for 12 gallons of paint, how much does one gallon of paint cost?

- Nina goes to the neighborhood store to buy 14 rolls of paper towels. She pays \$20.02 for her purchase. How much does one roll of paper towel cost?

Math-Aids.Com

If he buys {4} candy bars, how much total money will he spend? Step 3: First find $\frac{1}{4}$ of \$100. How much money does she have left over? We then convert the cents back into dollars: 250 cents = \$2.50 Step 5: Write the answer. Each friend spent \$2.50. ($\frac{1}{4}$) of his earnings came from tutoring students in math. Add Subtract Multiply Divide Total Difference Each Each in all Less than Row Split Together/ All together How many more Group Row And Minus Total Half Sum Left over Double Fourth Below are some examples of key words in word problems. Step 5: Write the answer. One way to do this is to convert \$7.50 into cents. This gives 750 cents which we then divide by 3750 cents $\div 3 = 250$ cents. Dividing decimals may present a challenge for your child. Money Word Problems: Worksheets Listed below are the 3 worksheets included in the above lesson Test Questions Have your children try the 8 questions in the Post-assessment worksheet below. $38 \div 0.25 = 83.25$ Step 7: Write the answer. Rudy will put \$8.25 in each group. 25.00 - 15.839.17 Step 5: Solve and write the answer in dollars. Jessica has \$9.17 left over Example 3 of 8: Money Word Problem With Multiplication Sol wants to buy a candy bar for \$0.75. The 7 is in the tenths place and the 5 is in the hundredths place. Coins are parts of dollars just like decimals are parts of whole numbers. Step 3: Write a number sentence (15.25 + 17.75) Step 4: Rewrite the problem vertically. Line up decimal points. Three quarters divided by 3 is one quarter or 0.25. (Add 250 + 175 = 425 cards). Step 3: First, add the total amount that she spent (\$10.99 + \$8.25 + \$9.50 = \$28.74) Step 4: Then, subtract the total amount Talia spent from the amount she started with (\$50.00 - \$28.74 = \$21.26) Step 5: Write the answer. Step 2: Ask: What is this question asking me to do? He asks his friends to pay him for their share. (How much did she have left over?). You are free to continue using these materials but we can only support our current worksheets, available as part of our membership offering. Try this Multi-step word problems worksheet to practice with problems that are similar to examples 5 and 6 above. Learning Outcomes On successful completion of this lesson your child will be able to: Solve money problems using all four operations (addition, subtraction, multiplication, and division) Solve multi-step problems (e.g. first multiply, then subtract) Solve money problems using simple fractions Warm Up Work through the warm up section below with your children and then try the worksheet before moving on to the main part of the lesson. Talia spent \$21.26 Remind your child that a multi-step problem means that there is more than one step in solving the problem. Lastly, students will solve money problems using simple fractions. Step 3: Write a number sentence (25.00 - 15.83) Step 4: Rewrite the problem vertically. Line up decimal points. If ($\frac{1}{4}$) his money came from shoveling snow, how much money did he make raking leaves? Check their answers and review this lesson with them if necessary. Our grade 5 decimal division worksheets start with simple "mental math" questions emphasizing the understanding of decimal place value and finish with more challenging decimal long division exercises. Keep up with consistent practice and you'll be high in the topic in no time! Note: this page contains legacy resources that are no longer supported. Silver's garden? He wants to split the money into groups to save for (three things): movie tickets; art supplies; music downloads. He wants to share his gum with (two) friends. Step 3: First find $\frac{1}{4}$ of \$240. Subtracting Decimals Word Problems These decimal word problems reinforce the real-life subtraction skills such as tender the exact change, compare the height, the difference between the quantities and more. If he wants the same amount for each activity, how much money will he put into each group? (Subtract 250 - 175 = 75 cards). Step 3: Write a number sentence (\$24.75 \div 3) Step 4: Divide whole dollars first (24 \div 3 = 8) Step 5: Divide cents next (0.75 \div 3 = 0.25) Step 6: Add dollars and cents. (How much will Rudy put into each group?) How much did she make in total? Including Josiah, how much does each person spend on gum? Example 6 of 8: Multi-step Money Word Problem Josiah is buying {5} packs of gum that cost {1.50} each. (Divide 18 \div 6 = 3 daisies in each row) Money, Decimals, Fraction Connections The chart below shows you connections between money, decimals, and fractions Money Decimal Fraction Quarter 0.25 $\frac{1}{4}$ Fifty cents/ half dollar 0.5 or 0.50 $\frac{1}{2}$ Seventy-five cents 0.75 $\frac{3}{4}$ Dollar 1.0 or 1 whole Pre-assessment worksheet Have your children try the assessment worksheet below before starting the main lesson. How many baseball and football cards does he have in all? She buys a DVD for {10.99}. Silver also has lilies in her garden. Todd made \$50 shoveling snow. (Determine how much total money will Sol spend?). Then she buys a new pair of earrings for {8.25}. Step 1: Underline important information and {bracket} important numbers. Find all of our decimals worksheets, from converting fractions to decimals to long division of multi-digit decimal numbers. She buys a used game for {15.63}. How many daisies are in each row? The perfect blend of word problems makes the grade 6 and grade 7 children stronger in performing the multiplication and division operation. How much money did he make tutoring students in math? (How much did each person spend on gum?). Word Problems: Money - Post-assessment (8 questions) She planted 18 daisies. Dividing Decimals Word Problems These division word problems require children to divide the decimals with the whole numbers. Example 7 of 8: Money Word Problem With Fractions Todd has {100} saved from shoveling snow and raking leaves. Students will solve problems involving multiple steps (for example, students may be asked to first add, then subtract). (How much will Talia have after she goes shopping?). Take these printable worksheets that help you reinforce the knowledge in adding and subtracting decimals. Ask the 6th graders to perform the division to find the quotient by applying long division method. If she starts with {50}, how much does she have after she goes shopping? Also, in the above problem, encourage your child to make connections between the 7.50 and the 3 as "seventy-five cents" and "three." If you divided 75 cents by 3, you would get 25 cents. Note: Your children might not be shown how perform operations with decimals until 5th Grade. (How much money did Spencer make tutoring math?). $100 \div 2 = 50$ Step 4: Since half divides the \$100 into two equal amounts, Todd made \$50 from raking leaves and \$50 from shoveling snow. (How much did she make in total). Adding Decimals Word Problems Decimal word problems presented here help the children learn decimal addition based on money, measurement and other real-life units. Word Problems: Money - Pre-assessment Main Lesson: Money Word Problems Below are eight examples of money word problems. (How much money did Todd make raking leaves?). (Multiply 6 x 5 = 30 daisies). Example 5 of 8: Multi-step Money Word Problem Talia is at the mall with her friends. Spencer made \$60 tutoring math. Decimals: Addition and Subtraction It's review time for grade 4 and grade 5 students. Partial product involves multiply the 75 in expanded form (70 x 4) + (5 x 4) = 300 Example 4 of 8: Money Word Problem With Division Rudy received {24.75} for his birthday. Example 2 of 8: Money Word Problem With Subtraction Jessica has {25.00} to spend in the video game store. These problems will include all four operations (addition, subtraction, multiplication, and division). How many more baseball cards than football cards does Jackson have? 5th grade students are expected to find the product and check their answer using the answer key provided in the second page. Lastly, she gets her mother a bouquet of flowers for {59.50}. How many total daisies are in Mrs. Avoid calculator. Multiplying Decimals Whole Numbers Reduce the chaos and improve clarity in your decimal multiplication sheet using this collection of no-prep, printable worksheets. Remind your children that 0.75 is $\frac{3}{4}$ quarters. Encourage them to count dollars and cents left over from change, that is in your wallet, or spare change in the house. Remind them that when they count money, they are adding and that coins are decimals. In this lesson, students will solve math word problems using money, decimals, and fractions. She has 6 rows of daisies. 15.25 + 17.753.00 Step 5: Solve and write the answer in dollars. Stephanie made \$33 dollars in total. Work through these with your children and have them try the word problem worksheets as they go. There are 2 decimal places. Mrs. Try this Money Word Problems Worksheet to practice with problems that are similar to examples 7 and 8 above. There are five word problems in each pdf worksheet. Example 8 of 8: Money Word Problem With Fractions Spencer received {240} a month for tutoring 4th grade students. Step 2: Ask: What is this question asking me to do? Silver has 5 rows of daisies in her garden. Help your children add money using real dollars and coins. Step 3: Write a number sentence (0.75×4) Step 4: Count the number of decimal places in 0.75. Since one-fourth ($\frac{1}{4}$) means to divide by 4, you are now dividing by a whole number: $240 \div 4 = 60$. Step 1: Underline operation key terms and {bracket} important numbers. Try this Word Problems Worksheet to practice with money word problems that are similar to examples 1 to 4 above. A must-have resource for young learners looking to ace their class! Decimal Division Whole Numbers Revive your decimal division skills with a host of interesting lifelike word problems involving whole numbers. There are 6 daisies in each row. Example 1 of 8: Money Word Problem With Addition Stephanie received {15.25} for babysitting on Friday night and {17.75} for babysitting on Saturday night. In this case, first you add, then you subtract. Multiplying Decimals Word Problems Each decimal word problem involves multiplication of a whole number with a decimal number. Operations and Key Words in Word Problems The chart below shows common terms for the 4 operations found in many word problems: Decimals: Multiplication and Division These decimal worksheets emphasize decimal multiplication and division. Step 5: Multiply 75 x 4 = 300 Step 6: Put the decimal point back into the product. 3.00 Step 7: Write the answer. Sol will have to spend \$3.00 Encourage your children to use the partial product method to multiply 75 by 4. Step 1: Underline operation key terms and {bracket} important numbers. Jackson has 250 baseball cards and 175 football cards. Step 3: First, multiply the number of packs of gum (5) by the cost of each pack (1.50) 5 x 1.50 = \$7.50 (5 x \$1) = \$5.00 (0.50 x 5) = \$2.50 (\$5.00 + \$2.50) = \$7.50 Step 4: Then, divide the total amount of the gum (\$7.50) by the number of people (3).
